EXPERIENCE

GRVTY Corp.

Software Engineer

January 2025 - Present

Remote

- Developed AI-powered DevOps review pipeline using Anthropic Claude API for automated code review on pull requests, implementing comprehensive prompt engineering and error handling strategies; deployed organization-wide improving code quality and reducing review cycle time by 60%.
- Built custom Model Context Protocol (MCP) servers enabling seamless integration between LLM agents and intelligence platform services, providing automated data retrieval, analysis workflows, and tool orchestration for AI-powered intelligence applications.
- Designed and developed a target and custody fusion platform processing 1000+ datapoints per minute from multiple disparate intelligence sources across AWS GovCloud (JWICS) and GCP classified networks, improving analyst workflow capabilities by 500% for Air Force 480th ISR Wing, Air Force Combat Command, and Air Force Research Laboratory.
- Built developer-facing APIs and internal tools using FastAPI enabling analyst teams to rapidly deploy custom intelligence workflows, reducing time-to-deployment for new analytical capabilities from weeks to hours.
- Architected scalable cloud-native platform using Kafka for data ingestion, Python microservices for data processing, and Kubernetes for orchestration and deployment, ensuring fault tolerance and high availability across classified environments.
- Established robust CI/CD pipeline using Jenkins with automated security scanning (Anchore, OWASP, SonarQube) and comprehensive testing strategy using pytest, maintaining 80%+ unit test coverage to ensure code quality and operational reliability.

United States Navy

Cyber Threat Intelligence Analyst

May 2023 - September 2024

Pensacola, FL

- Deployed on two incident response missions to critical DoD infrastructure sites as part of a cyber threat hunt team, identifying and resolving over 50 Indicators of Compromise (IoCs) in response to Advanced Persistent Threat (APT) activity targeting key DoD networks.
- Utilized the HELK stack (Hunting, Elasticsearch, Logstash, Kibana) to identify and remediate malicious cyber activity across numerous Department of Defense networks, enhancing threat detection and incident response capabilities.
- Applied advanced Artificial Intelligence techniques, including Natural Language Processing and Machine Learning, to enhance network traffic anomaly detection and strengthen cybersecurity measures, achieving a 90% reduction in processing time and significantly improving defense against malicious actors in the cyber domain.

United States Navy

GEOINT Analyst

October 2018 - May 2023

Washington, D.C.

- Developed automated data analysis tools using Python to filter, organize, and display sensor data, significantly improving processing speed and data accessibility for intelligence analysts.
- Built geospatial analysis platform integrating QGIS with Python for maritime and air domain trend analysis, delivering unprecedented situational awareness capabilities that were subsequently adopted fleet-wide.
- Designed and maintained SQL database fusing data from four intelligence watch floors aboard USS CARL VINSON CVN-70, establishing unified data access and communication across the intelligence enterprise.
- Contributed to data engineering and analytics toolset development for the Navy's Project Overmatch program, pioneering tactical data science integration afloat and catalyzing the fleet-wide 'Data Science at Sea' initiative.

EDUCATION

Georgia Institute of Technology Master of Science: Analytics Focus in Computational Data Analytics (Reinforcement Learning, High-Dimensional Data Analysis)	<i>August 2024</i>
University of Georgia Bachelor of Science: Civil Engineering	<i>May 2018</i>

CERTIFICATIONS

CompTIA National Geospatial-Intelligence Agency Department of Defense Clearance	Cybersecurity Analyst (CySA+) GEOINT Professional Certification - Fundamental, Imagery Analysis Intelligence Fundamentals Professional Certification Current TS/SCI (with Counterintelligence Polygraph)
